Aurora Labs - Data Retention & Sub-processor Policy

Owner: Information Security | Version 3.1 | Effective 1 April 2026 | Review: annual

1. Purpose

This policy defines how long Aurora Labs retains customer and operational data, and how sub-processors are managed. It applies to all production systems and to every employee who handles customer data.

2. Retention periods

Customer records are retained for 7 years after account closure, as required by financial record-keeping obligations. Audit logs are retained for 18 months. Application logs are retained for 30 days, and database backups are destroyed after 90 days.

Flow run payloads follow the product retention schedule: 30 days by default, 90 days on Scale and 12 months on Enterprise. Deletion requests are validated against the workspace owner and processed within 30 days.

3. Sub-processors

Aurora Labs uses the following sub-processors. Each is bound by a data processing agreement that meets or exceeds our own commitments to customers.

Sub-processor	Purpose	Location
Amazon Web Services	Hosting and backups	EU (Frankfurt)
Cloudflare	Edge security and WAF	Global
Postmark	Transactional email	US (Virginia)
Anthropic	AI assistance features (opt-in)	US

4. Change notification

Customers are notified at least 30 days before a new sub-processor is added and may object in writing. Objections are reviewed by the DPO within 10 business days.

5. Breach notification

Confirmed data breaches are reported to affected customers within 72 hours, and to the Information Regulator where POPIA requires it. Internally, any suspected breach must reach the Security team within 1 hour of discovery (security@auroralabs.example).

6. Roles

The Chief Information Security Officer owns this policy. The Data Protection Officer approves sub-processor changes and handles regulator communication. Engineering teams own deletion automation for their systems.
